TRAINING SUBJECTS

- Gas measurement • personal protective equipment • emergency procedures
- work at height

TRAINING PROCEDURE

Theory

Thorough seminar regarding Enclosed Space Entry principles, regulations and procedures.

Familiarization

With the necessary personal protective equipment as well as escape and rescue equipment.

Procedures

Understanding the importance of security procedures and their implementation before proceeding to real life scenarios.

Simulation

of real Enclosed Space Entry procedures on customized scenarios according to your applications and based on your needs.

The simulation-based training prepares workers for entry into enclosed spaces. Participants acquire all knowledge required to enter, and work safely and efficiently.
